

DEELAKA RANSILU

DevOps Intern Candidate | Full-Stack Developer | BIT Final Year - University of Moratuwa

Email: ransilu.deelaka@gmail.com LinkedIn: [deelaka-ransilu](#) Phone: +94 712 026 132 Location: Kottawa, Sri Lanka

PROFESSIONAL SUMMARY

Final-year BIT student at the University of Moratuwa with hands-on professional experience as a Technical Support Executive and strong development skills across Linux, Git, REST APIs, and full-stack technologies. Eager to grow in DevOps and Cloud Engineering — actively learning Docker, Kubernetes, and AWS. Comfortable working in Linux-based environments (Ubuntu as primary OS), collaborating via Git, and building reliable backend systems.

TECHNICAL SKILLS

OS & Shell	Linux (Ubuntu - primary dev OS), Bash scripting, Windows
DevOps & Cloud	Docker (fundamentals), Git, GitHub, CI/CD concepts, AWS (learning), Kubernetes (learning)
Backend	Spring Boot (Java), REST API, GraphQL, JWT Authentication
Frontend	Next.js, React, TypeScript
Databases	PostgreSQL, Microsoft SQL Server
Tools	Cloudinary, PayHere, Google Calendar API, Resend, Maven
Languages	Java, Python, JavaScript / TypeScript, SQL

WORK EXPERIENCE

Technical Support Executive | [myPOS Software Solutions \(Pvt\) Ltd](#) 2025 - JUL – 2026 JAN

- Provided technical support for POS software deployed on Linux and Windows environments, diagnosing hardware and software integration issues.
- Collaborated with development teams to escalate and reproduce bugs, improving response time for critical production issues.
- Managed client environments and assisted in software deployment and configuration on-site.
- Documented issue resolution workflows, contributing to a cleaner internal knowledge base.

KEY PROJECTS

Online Dress Rental & E-Commerce Platform

Spring Boot · Next.js · PostgreSQL · Docker · JWT · PayHere · Cloudinary

Final Year Project — A full-stack e-commerce platform for dress rental with real-time availability, secure JWT-based authentication, payment integration, automated email notifications, and cloud image storage.

- Designed and implemented RESTful API backend with Spring Boot on a Linux development environment.
- Containerised services using Docker for consistent local development and deployment.
- Integrated PostgreSQL with complex relational schemas for booking, inventory, and user management.
- Implemented CI-friendly project structure with Maven for build management.

Wedding RSVP Web App

Next.js · Supabase · Vercel · TypeScript · Tailwind CSS · React Hook Form · Zod

A production-deployed wedding invitation and RSVP platform built for a real client event (June 2026). Supports two separate event pages (wedding day and homecoming), an admin dashboard, and personalised invite link tracking. Live at: hiruni-pramodh-rsvp.vercel.app

- Deployed full-stack Next.js App Router application to Vercel with CI/CD — every push to main triggers automatic production deployment.
- Integrated Supabase (PostgreSQL) for RSVP data persistence, invite link management, and admin authentication via server-side API routes.
- Built invite code tracking system — each RSVP is linked to the sender who shared the invite, stored and queried from Supabase.
- Implemented admin panel with bulk CSV/XLSX invite upload, protected by session-based authentication.
- Applied form validation with React Hook Form and Zod; animated UI with Framer Motion and tsparticles on a luxury dark/gold design.

Developer Portfolio Website

React · TypeScript · Vite · GitHub Pages

- Built and deployed a responsive portfolio site using React and TypeScript, hosted via GitHub Pages with automated deployment.
- Implemented custom animations and dark-themed minimal UI, demonstrating frontend deployment pipeline experience.

EDUCATION

Bachelor of Information Technology (BIT) - Final Year | University of Moratuwa 2022 - Present

- Relevant modules: Web Services, Essentials of Machine Learning, Data Mining, Probability & Statistics, Distributed Systems.
- Active in project-based coursework covering REST APIs, web architecture, and database systems.

WHY DEVOPS?

I am highly comfortable in Linux-based environments, accustomed to using Git daily, and building and deploying backend services from scratch. My FYP exposed me to containerisation with Docker, service configuration, and environment management — core pillars of DevOps practice. I am actively expanding into AWS and Kubernetes and bring strong problem-solving fundamentals from both my development work and technical support background.
